INTRODUCTION

There is an enormous drive and enthusiasm in various industries, services and society as a whole nowadays to implement risk management in the organizations. There are high expectations, that risk management is the proper framework for obtaining high levels of performance. We see a lot of initiatives to establish adequate concepts and tools. However, the risk management discipline is young, and there are many difficult issues and challenges. These relate in particular to the foundation and use of risk analysis; how to express risk, how to handle uncertainties, and how to use risk analysis in a decision-making context. ISO 31000, Risk Management – Principles and Guidelines provides guidance for organizations in developing their own approach to the management of risk. It's use helps organizations of all sizes to increase the likelihood of achieving their objectives, improve the identification of opportunities and threats, and effectively allocate and use resources for risk treatment. The standard provides a systems-based, structured framework for managing uncertainties supporting attainment of objectives and the creation and protection of value. The risk assessment process describes how risk is identified, analyzed, evaluated and treated. The standard provides flexibility to implement a tailored risk management processes in sync with the organization's culture and manner and within resource constraints. The purpose of the seminar is to discuss some key concept and principles of risk analysis and risk management.

OBJECTIVES

- Understand the key principles of risk management;
- Recognize supply chain risks and interdependencies;
- Identify, analyze and evaluate risk in a risk assessment process;
- Make informed decisions about treating and controlling risk;
- Monitor and review their risk management process.
- Map a supply/value chain and related risks.
- Promote risk-thinking and risk-based culture in an organization.
- Using a risk-based approach to managing a supply chain, planning, and decision-making.
